PROFILE

Python developer with more than four years of commercial experience in SQL, PostgreSQL/PostGIS and automation of geospatial data processing. Build batch workflows, API-driven data enrichment, reusable database utilities and analytical exports. Demonstrate Apache Airflow orchestration and MinIO/S3-based ETL in an independent engineering project. Focus on data quality, predictable processing and reliable integrations.

CORE SKILLS

SQL & storage PostgreSQL, PostGIS, SQL, EXPLAIN ANALYZE, psycopg3, SQLAlchemy

Data engineering Python, batch processing, ETL, CSV/Excel/JSON, API integrations

Orchestration (projects) Apache Airflow 3, Assets, dynamic task mapping, MinIO/S3

Geospatial Geocoding APIs, OSM/Overpass, Shapely, pyproj, GeoJSON

Data science tools pandas, NumPy, scikit-learn Pipelines, Pydantic v2

Quality & delivery pytest, Testcontainers, Ruff, mypy, Docker, GitHub Actions, Linux

PROFESSIONAL EXPERIENCE

Software Engineer - Python, Data & Automation

Maxim Technology · Feb 2022 - Present · Remote

- Develop **Python and SQL** workflows for normalizing, enriching and bulk-processing address and geospatial data with **PostgreSQL/PostGIS**.
- Implemented batched processing and connection pooling for large datasets, including a run of **up to 46 million address records** in approximately **6–8 hours**.
- Integrated geocoding and geospatial data sources; refactored concurrent API requests with retries, quota handling and error recovery.
- Automated **CSV imports into PostgreSQL staging tables, SQL transformations and result exports**; built reusable SQLAlchemy/psycopg utilities for database operations.
- Investigate slow queries and data-quality incidents using **EXPLAIN ANALYZE**, SQL diagnostics and logs; prepare validated exports and technical findings.

FREELANCE & CLIENT WORK

Freelance Python Developer

Project-based client work · Selected engagements · Remote

- Integrated marketplace and supplier APIs, transformed inventory data and automated stock synchronization with **Ozon**.
- Built Python tools for extracting, transforming and exporting **CSV/Excel/JSON** data across client workflows.
- Used HTTP clients and **Playwright/Camoufox** for data collection where necessary; packaged selected utilities for Docker/Linux.

SELECTED DATA & ENGINEERING PROJECTS

Yandex API Region Parser · GitHub

Apache Airflow 3 · PostgreSQL · MinIO/S3 · Shapely · Python

Built a four-DAG geospatial ETL pipeline: PostgreSQL polygons, point-grid generation, parallel Yandex Geocoder API requests, then deduplicated CSV output to MinIO/S3. Added Airflow Assets, dynamic task mapping, retries and automated tests.

MaximML · GitHub

pandas · NumPy · scikit-learn · FastAPI · SQLAlchemy

Implemented regression data preparation and persisted scikit-learn Pipelines with leakage-aware train/test separation. Exposed model training and inference through FastAPI, with SQLAlchemy storage for training history.

Task Service API · GitHub

PostgreSQL 16 · SQLAlchemy 2 · Alembic · FastAPI

Built an asynchronous PostgreSQL-backed API with structured relational models, Alembic migrations, database triggers and integration tests. Separated service logic and persistence boundaries.

Moon Courier Crisis · GitHub

Python · SQLAlchemy · FastAPI · Docker · pytest

Modeled delivery, order and route data with SQLAlchemy repositories and Unit of Work. Implemented typed API contracts, business rules and tests in a Docker-based portfolio application.

EDUCATION

Kazan Federal University · Applied Mathematics and Computer Science · 2021–2026
