Danil Miftakhov

Python Data / ETL Developer

Yerevan, Armenia · Open to remote work and relocation

danilfaritovichwork@gmail.com
GitHub · LinkedIn · Telegram

PROFILE

Python developer with commercial experience since 2022 in SQL, PostgreSQL/PostGIS and geospatial data automation. I build extraction, transformation, bulk-import and export workflows. A separate personal project demonstrates Airflow orchestration and MinIO/S3 intermediate storage.

CORE SKILLS

SQL / Storage	PostgreSQL · PostGIS · SQL · psycopg · SQLAlchemy
Processing	Python · Batch processing · CSV / Excel / JSON · API integration
Portfolio ETL	Apache Airflow · MinIO/S3 · Shapely · PyProj
Quality / Tools	pytest · Docker · Linux · GitHub Actions · pandas

PROFESSIONAL EXPERIENCE

Software Engineer · Maxim Technology

February 2022 – Present · Remote

- Develop and maintain Python/SQL workflows for address and geospatial data normalization, enrichment, bulk imports and exports in PostgreSQL/PostGIS.
- Built the complete Python tool for selecting and processing records, exporting SQL files and loading SQL data into a database. One run handled up to 46 million address records in approximately 6–8 hours.
- Refactored geocoding integrations with concurrent requests, retries, API-quota handling and explicit error processing.
- Investigate data-quality and SQL performance issues using database queries, execution plans and application logs; document technical findings.

CLIENT WORK

Freelance Python Developer

Project-based engagements · Since approximately 2020

- Delivered supplier-to-Ozon stock synchronization: transformed inventory data and integrated the marketplace workflow with Python.
- Built CSV/Excel/JSON processing utilities and browser/API automation; packaged selected solutions for Docker/Linux.
- Developed Telegram interfaces for controlling server utilities, changing settings and inspecting logs.

SELECTED ENGINEERING PROJECTS

Geospatial ETL Pipeline · Source

Python · Apache Airflow · PostgreSQL · MinIO/S3 · Shapely

Four connected DAGs read locality polygons, generate coordinate grids, call Yandex Geocoder under API quotas and export deduplicated district data. Intermediate results are stored outside task memory. A personal orchestration project, separate from commercial PostgreSQL work.

Task Service API · Source

FastAPI · PostgreSQL · SQLAlchemy 2 · Alembic · pytest

An asynchronous API for tasks, users and services. Relational models, migrations and database triggers support persistence rules; service boundaries separate HTTP handling from database access. Integration tests exercise the API.

MaximML · Source

scikit-learn · pandas · FastAPI · SQLAlchemy · React

A California Housing regression application. Saved scikit-learn Pipelines preserve fitted preprocessing for inference; train/test separation precedes fitted transforms. FastAPI exposes training and prediction with persisted training history and a React interface.

EDUCATION

Kazan Federal University · Applied Mathematics and Computer Science · 2021–2026 · Completed
