PROFILE

Python Backend Developer with over four years of commercial experience in Python automation, PostgreSQL/PostGIS data processing and external API integrations. Build backend applications with FastAPI, SQLAlchemy and asynchronous Python in portfolio and client work. Focus on reliable data-intensive workflows, clear service boundaries and automated testing.

CORE SKILLS

Backend Python, FastAPI, Flask, REST APIs, asyncio, aiohttp, Pydantic v2

Databases PostgreSQL, PostGIS, SQLAlchemy 2, Alembic, psycopg3, SQLite

Engineering Service layers, repositories, Unit of Work, transactions, external APIs

Quality pytest, integration/E2E tests, Ruff, mypy, GitHub Actions

Tools Docker, Docker Compose, Linux, Bash, Git, Playwright

PROFESSIONAL EXPERIENCE

Software Engineer - Python, Data & Automation

Maxim Technology · Feb 2022 - Present · Remote

- Develop and maintain Python tools for geospatial data normalization, enrichment and bulk processing with **PostgreSQL/PostGIS** and external APIs.
- Implemented batched, concurrent processing with connection pooling for address datasets, including a run of **up to 46 million records** in approximately **6–8 hours**.
- Refactored geocoding integrations using asynchronous API requests, retries, rate-limit handling and resilient error processing.
- Built reusable **SQLAlchemy/psycopg** utilities and automated workflows for importing CSV data into PostgreSQL, executing SQL and exporting results.
- Investigate SQL performance and data-quality incidents using query plans, application logs and database diagnostics; document findings and follow-up actions.

FREELANCE & CLIENT WORK

Freelance Python Developer

Project-based client work · Selected engagements · Remote

- Delivered Python API integrations and e-commerce data automation, including supplier-to-**Ozon** stock synchronization.
- Developed parsers and browser automation with **Playwright/Camoufox**; used HTTP clients and direct APIs when practical.
- Built CSV/Excel/JSON import, transformation and export utilities; packaged selected solutions with **Docker** for Linux environments.

SELECTED PROJECTS

Moon Courier Crisis · GitHub

FastAPI · SQLAlchemy · Vue 3 · Docker

Developed a typed FastAPI service with domain logic for orders, rover routes and delivery lifecycle. Used SQLAlchemy repositories and Unit of Work for server-side rules; added automated tests and Docker Compose.

Task Service API · GitHub

FastAPI · PostgreSQL · SQLAlchemy · Alembic

Built an asynchronous task-management REST API with Pydantic v2, SQLAlchemy AsyncSession and Alembic migrations. Separated HTTP, business logic and persistence, with integration tests.

Support Assistant · GitHub

Python · FastAPI · Pydantic · LLM APIs

Developed an LLM-assisted support-ticket routing and reply-drafting prototype with ports-and-adapters structure, typed validation, structured logging and automated tests.

Yandex Geocoder Region Parser · GitHub

Python · Apache Airflow · PostgreSQL · MinIO/S3

Implemented four connected Airflow DAG stages for polygon ingestion, coordinate generation, geocoding requests and result aggregation, including retries and external intermediate storage.

EDUCATION

Kazan Federal University · Applied Mathematics and Computer Science · 2021–2026
