Danil Miftakhov

AI / LLM Integration Developer

Yerevan, Armenia · Open to remote work and relocation

danilfaritovichwork@gmail.com
GitHub · LinkedIn · Telegram

PROFILE

Python developer with commercial data-automation and API-integration experience since 2022. Implemented a two-pass LLM workflow for geospatial-name translation and review. Personal projects demonstrate validated structured outputs, user confirmation and MCP tooling for bounded agent execution.

CORE SKILLS

LLM integration	LLM APIs · OpenRouter · JSON Schema · Pydantic
Agent tooling	MCP stdio · Codex CLI · OpenCode · Structured results
Python / Data	FastAPI · asyncio · PostgreSQL · SQLAlchemy
Reliability	Retries · Timeouts · pytest · Docker · GitHub Actions

PROFESSIONAL EXPERIENCE

Software Engineer · Maxim Technology

February 2022 – Present · Remote

- Implemented a two-pass geospatial-name translation workflow: rules agreed with translators, initial LLM translation, second-pass review and conditional revision.
- Develop and maintain Python/SQL workflows for address and geospatial data normalization, enrichment, bulk imports and exports in PostgreSQL/PostGIS.
- Refactored geocoding integrations with concurrent requests, retries, API-quota handling and explicit error processing.
- Investigate data-quality and SQL performance issues using database queries, execution plans and application logs; document technical findings.

CLIENT WORK

Freelance Python Developer

Project-based engagements · Since approximately 2020

- Delivered supplier-to-Ozon stock synchronization: transformed inventory data and integrated the marketplace workflow with Python.
- Built CSV/Excel/JSON processing utilities and browser/API automation; packaged selected solutions for Docker/Linux.
- Developed Telegram interfaces for controlling server utilities, changing settings and inspecting logs.

SELECTED ENGINEERING PROJECTS

Portfolio work includes AI-assisted implementation. My work spans requirements, integration, validation and delivery; the projects below are personal engineering applications.

Support Assistant · Source

FastAPI · OpenRouter · JSON Schema · Pydantic · Redis · Vue 3

An IT-ticket demonstration under development. An LLM proposes a department; the user confirms or changes it before description generation. Schema validation, retries, timeouts and shared quotas control the external integration. Ports isolate the model provider from application logic.

Codex Free Worker MCP · Source

Python · MCP stdio · OpenCode · Codex CLI · Structured results

A local bridge for bounded development tasks. OpenCode or a child Codex CLI inspects command output and returns compact structured results. Result contracts and permission handoff support diagnostics and mechanical fixes without moving architecture decisions to the worker.

Codex Development Standards · Source

Agent Skills · Git · CI · Validation workflows

Reusable instructions and stack profiles for AI-assisted development: scoped context, consistent project workflows, targeted validation and reviewable changes. Complements the executable MCP integration rather than representing a separate production AI service.

EDUCATION

Kazan Federal University · Applied Mathematics and Computer Science · 2021–2026 · Completed
