PROFILE

Python developer with more than four years of commercial experience in data automation, PostgreSQL-backed workflows and API integrations. Implemented a rule-driven, two-pass LLM workflow for translating and reviewing geospatial names. In independent projects, build LLM-enabled FastAPI services, structured-output integrations and MCP agent tools. Focus on reliable Python systems, explicit validation and human control.

CORE SKILLS

Applied LLM LLM API integration, prompt/rule design, two-pass review, structured JSON Schema outputs

Agent tooling MCP (stdio), Codex CLI, OpenCode, task delegation, permission handoff

Backend Python, FastAPI, REST APIs, Pydantic v2, asyncio, aiohttp, SQLAlchemy

Data & reliability PostgreSQL, PostGIS, SQLite, retries, timeouts, structured logging

Quality & delivery pytest, integration tests, Ruff, mypy, Docker, GitHub Actions, Linux

PROFESSIONAL EXPERIENCE

Software Engineer - Python, Data & Automation

Maxim Technology · Feb 2022 - Present · Remote

- Implemented a **two-pass LLM workflow** for geospatial-name localization: translation using rules agreed with translators, followed by a second-pass quality review and conditional revision.
- Develop and maintain Python automations for **PostgreSQL/PostGIS** data processing, geospatial enrichment and external API integration.
- Refactored geocoding integrations using concurrent API requests, retries, rate-limit handling and robust error processing.
- Built reusable **SQLAlchemy/psycopg** utilities and batched processing workflows, including a run of up to **46 million** address records.
- Investigate data-quality and SQL performance issues through database queries, execution plans and application logs; document technical findings.

FREELANCE & CLIENT WORK

Freelance Python Developer

Project-based client work · Selected engagements · Remote

- Delivered Python API integrations and e-commerce automation, including external supplier data transformation and **Ozon** stock synchronization.
- Created web/data automation with **Playwright/Camoufox** and HTTP clients, using direct APIs when available.
- Built CSV/Excel/JSON processing utilities; packaged selected solutions with Docker for Linux environments.

SELECTED AI / PYTHON PROJECTS

Support Assistant · GitHub

Python · FastAPI · OpenRouter · JSON Schema · Pydantic

Built an LLM-assisted IT-ticket routing and drafting application with explicit human confirmation. Integrated structured JSON Schema outputs, Pydantic validation, retries and timeouts; added tests and Redis request quotas.

Codex Free Worker MCP · GitHub

Python · MCP · OpenCode · Codex CLI · JSON contracts

Created an MCP stdio bridge for delegating bounded inspection and mechanical fix tasks to OpenCode or child Codex. Implemented structured result contracts, permission handoff and compact diagnostics.

Codex Development Standards · GitHub

AGENTS.md · Agent Skills · Git · CI · AI workflows

Developed reusable instructions, skill profiles and validation workflows for AI-assisted engineering. Emphasized scoped context, predictable changes, targeted checks and concise tool output.

MaximML · GitHub

Python · FastAPI · scikit-learn · pandas · Docker

Built a portfolio ML application with leakage-aware preprocessing, persisted scikit-learn Pipelines and FastAPI inference, keeping training transformations consistent at prediction time.

EDUCATION

Kazan Federal University · Applied Mathematics and Computer Science · 2021–2026
